

Odyssey Expedition Inter-Agency Command Authority Protocol

1. Chain of Command Hierarchy

The Expedition Commander holds absolute operational authority during red and yellow alert conditions. Science payload directors report through the Deputy Commander.

2. Off-Nominal Life Support Allocation

In scenario DELTA (loss of primary oxygen generation), non-essential activity is suspended, habitat zones 3 and 4 are isolated, and basal metabolic rations are enforced.

3. Earth Communications Blackout Rules

During solar conjunction (2-week blackout when Sun is between Mars and Earth), the outpost operates under full autonomous local governance without real-time mission control oversight.
